Website Quality Report

Preface

The Government of India through its flagship Digital India Program is taking steps to ensure the complete transition from manual to electronic delivery of information and services by all Government agencies to its citizens. As part of the Digital India Programme, Content Management Framework (CMF) project has been initiated for standardization and improvement in presentation and content delivery of websites of Central Government Ministry/Department websites.

A majority of the Central Government Ministry/Department websites has been migrated to CMF and is running successfully. The CMF project also envisages of helping the Government Ministry/Department(s) track their website compliance over a period of time. In order to support them the CMF team has studied in details the process of website performance testing and reporting around but not limited to Accessibility, Usability, SEO, Best practices, Standards and identification of errors etc.

The Website Quality Report aims to assist the Ministry/Departments in ensuring that their website consistently conforms to a high standard of quality and complies with World Standards.

Compliance to Website Quality Report would conform to the essential prerequisites of UUU trilogy i.e. Usable, User-Centric and Universally Accessible. This would also help in meeting the requirements of W3C's Web Content Accessibility Guidelines (WCAG 2.0), The Rights of Persons with Disabilities Act 2016, Information Technology Act of India and Guidelines for Indian Government Websites (GIGW).

Website Quality Report

Summary Report

Site quality report for <http://www.cvc.nic.in/>

Category	Results	
Overall Quality		254 pages with quality issues
Errors		16 pages with broken links or other errors
Accessibility		205 pages with accessibility problems
Compatibility		188 pages with browser specific issues
Search		204 pages with search engine issues
Standards		242 pages have W3C standards issues
Usability		204 pages with usability issues
Totals	368 pages and images checked	

Website Quality Report

Errors

This section shows site quality issues, including broken links and server mis-configurations.

Priority 1

3 issues on 16 pages

This IMG links to a file with the wrong MIME type for an image.

This can happen if you link an image to an HTML page, or the image is missing and an error page is returned instead.

This link is broken. The target anchor does not exist or is commented out.

Website Quality Report

The anchor after the # symbol points to a non-existent NAME or ID on the target page. If the anchor link targets the same page nothing will happen when it's clicked. If the anchor link targets another page, then the top of the target page will be displayed instead of the intended location. In most cases the destination anchor has been removed accidentally and should be reinstated.

Accessibility

This section shows accessibility issues, indicating problems for older users, people with disabilities or accessibility needs. Automated testing cannot detect all accessibility issues, so should be used alongside human testing.

Level A

6 issues on 204 pages

- Each A element must contain text or an IMG with an ALT attribute.

Add text to the link, or ALT text if the link contains an image. If there is no link text or the ALT text is blank, screen readers have nothing to read, so read out the URL instead. The TITLE attribute on the A element doesn't work in:

- WindowEyes 8.4 with IE11 (the link HREF is read instead)
- VoiceOver on OSX 10.9 (the image filename is read instead)

<http://www.cvc.nic.in/> line 1 5 6 1269 ...

<http://www.cvc.nic.in/website-policy> line 1016
<http://www.cvc.nic.in/whats-new> line 1015

Guideline: [WCAG 2.0 A F89](#)

- No TITLE attributes found for the frames on these pages.

Add a TITLE attribute to each FRAME and IFRAME element (e.g. TITLE="Main Content"). Without a TITLE some screen readers read out the FRAME filename, which is usually meaningless. IFRAMEs with no title cause problems in:

- JAWS 14 and 15 with Firefox (the frame SRC filename is read instead)
- VoiceOver on OSX 10.9 (a meaningless title like "Frame twelve" is read out)

Website Quality Report

<http://www.cvc.nic.in/iem-applications> line 979

<http://www.cvc.nic.in/panel-iems> line 979

Guideline: [WCAG 2.0 A 2.4.1](#)

- This page has duplicate IDs which cause problems in screen readers.

Two or more elements on this page share the same ID, which cause problems in screen readers which use IDs for labeling controls and table headings. This also causes problems in JavaScript methods like getElementById and querySelector, which behave inconsistently when duplicate IDs are present. Change the ID so it is unique for each element.

<http://www.cvc.nic.in/website-policy> line 979

Guideline: [WCAG 2.0 A F77](#)

- This page has markup errors, causing screen readers to miss content.

Fix the errors listed on the Standards tab of this report. Markup errors like missing end tags mean screen readers may skip important content.

<http://www.cvc.nic.in/website-policy> line 979

Guideline: [WCAG 2.0 A F70](#)

- Use the LANG attribute to identify the language of the page.

In HTML add a LANG attribute to the HTML tag, and in PDF set the language using Document Properties in Acrobat. This allows screen readers to pronounce words correctly.

Guideline: [WCAG 2.0 A 3.1.1](#)

 Using ALT text which duplicates link text in the same link or the following link results in screen readers stuttering as the same text is read out twice.

Use ALT=" when the image is part of a link containing text, or change the redundant ALT text if the links are separate.

<http://www.cvc.nic.in/media/gallery> line 1013 ...

<http://www.cvc.nic.in/media/video-gallery> line 1002

Guideline: [WCAG 2.0 A H2](#)

Level AA

3 issues on 18 pages

 Ensure that foreground and background colors have enough contrast.

Some users find it hard to read light gray text on a white background, dark gray text on a black background and white text on a red background.

- The contrast ratio should be 3.0 or more for 18 point text, or larger
- The contrast ratio should be 3.0 or more for 14 point bold text, or larger
- The contrast ratio should be 4.5 or more for all other text

The foreground to background color contrast ratio is:

3.7 with color: rgb(255,0,0); background-color: rgb(255,255,0); font-size: 12pt; font-weight: 400

<http://www.cvc.nic.in/sites/all/themes/cmfc/css/no-js.css> line 1

Guideline: [WCAG 2.0 AA 1.4.3](#)

 Form field labels should be unique on a page, or enclosed in a FIELDSET with a LEGEND that makes the label unique.

Website Quality Report

When a form contains items with the same label, screen reader users find it difficult to tell them apart. Adding a fieldset with a legend differentiates the controls, because the legend text is announced along with the label text. For example:

<code></label></code>	<code><label> No </label></code>	<code><legend> Gift wrapped: </legend></code>	<code><label> Yes</code>
<code>Yes </label></code>	<code><label> No </label></code>	<code><legend> Express delivery: </legend></code>	<code><label></code>

Guideline: [WCAG 2.0 AA 2.4.6](#)

Use relative rather than absolute units in CSS property values.

Absolute units are CM, MM, IN, PC and PT. When used with fonts PX is also considered an absolute unit, because it isn't relative the user's preferred font size. Low-vision users, and a lot of people over 50, increase the browser default font size to make text easier to read. Absolute units ignore this user choice. Relative units like EM and percentages "stretch" according to the screen size and/or user's preferred font size, and work on a large range of devices.

Usability

This section shows general usability issues, indicating navigation problems for all users.

Priority 1

3 issues on 188 pages

Ensure that a pushbutton's label clearly indicates its action.

Make sure the button has a VALUE attribute indicating the action the pushbutton causes (e.g. Search, Cancel, etc.)

<http://www.cvc.nic.in/> line 355

Guideline: [Usability.gov 13:2](#)

Have a link labeled 'Home' on every page on the site, except for the home page.

Many sites place the organization's logo on the top of every page and link it to the homepage. While many users expect logos are clickable, around 25% will not realize that links to the homepage. Therefore, include a link labeled 'Home' near the top of the page to help those users.

Guideline: [W3C](#)

Omitting IMG WIDTH or HEIGHT attributes means page text jumps about as images load.

This makes the page very hard to read while it's loading, and the user may click on the wrong link if it moves as it's being clicked. Add width and height attributes to the img tag matching the image dimensions. Authoring tools like Dreamweaver can automate this process.

Guideline: [Usability.gov 14:3](#)

The IMG WIDTH and HEIGHT attributes don't match the actual image size. This means the image will be scaled or distorted.

Image <http://www.cvc.nic.in/sites/default/files/newofficer.png> actual dimensions: 240 x 240 pixels.
<http://www.cvc.nic.in/> line 1050
Image <http://www.cvc.nic.in/sites/default/files/newofficer.png> actual dimensions: 240 x 240 pixels.
<http://www.cvc.nic.in/hi> line 1882

Guideline: [W3C](#)

Use text links rather than image links. In general, text links are more easily recognized as clickable.

Website Quality Report

Text links usually download faster, are preferred by users, and should change colors after being selected. It is usually easier to convey a link's destination in text, rather than with the use of an image. Users often find it hard to tell which images are clickable without moving the cursor over them ('minesweeping'). Another benefit to using text links is that users with text-only and deactivated graphical browsers can see the navigation options.

Guideline: [Usability.gov 10:6](#)

Priority 3

2 issues on 2 pages

- 🔴 Radio buttons are easier to use than drop-downs when there are 6 choices or fewer.

One usability study showed radio buttons give reliably better performance than drop-down lists for mutually exclusive selections. If screen space allows use radio buttons instead of lists/dropdowns with fewer than 7 items.

<http://www.cvc.nic.in/feedback> line 984

Guideline: [Usability.gov 13:9](#)

- 🔴 Use link text between 3 and 100 characters so it's long enough to be understood, but avoids line wrapping.

A single word text link may not give enough information about the link's destination. A link that is a full sentence is difficult to read quickly, particularly if it wraps to another line.

Website Quality Report

<http://www.cvc.nic.in/> line 1 7

Guideline: [Usability.gov 10:11](#)

Priority 5

1 issues on 1 pages

- Capitalize the first letter of the first word in lists.

Only the first letter of the first word should be capitalized unless the item contains another word that would normally be capitalized.
